C3 Enterprise Edition
For Today's Mobile World

Chameleon Solution: C3 Location Systems' Location Based Solutions (LBS) include both hardware and software GPS components that are critical to the quality of our security solution. C3 Chameleon© software has been engineered to create an ultra high speed, scalable, enterprise grade solution. Chameleon© Enterprise Edition is a robust solution with a high speed map engine that provides sub-second Map refresh, 20,000 reverse Geo codes per second, and can support over 1-Million GPS devices by adding inexpensive PC's to the cluster, as needed, for unlimited growth.

The software was designed to use any GPS devices available. This ability to be hardware agnostic allows maximum flexibility and the ability to select the correct hardware supplier for the task at hand. C3 has the ability to use any manufacturer unlike most GPS companies which are locked in to one supplier. This is a unique capability and allows maximum flexibility.

C3 Location Systems offers a complete turnkey solution for Municipal Response Centers, Alarm Central Stations, large and small commercial fleets, and Emergency Service Providers that includes a self-service high speed Internet application, 24X7 live Operators for Location Based Concierge Services, 24X7 Live Operator Emergency Medical Response, or a combination of all three.

C3's Integrated Chapman Fleet Logic

Fleet Logic Solution: The strategic acquisition of Iris Systems' a Fleet Management Software company, includes a comprehensive Business Management System for Vehicle Fleet Companies, complements and extends C3's GPS Location Based Solutions. Fleet Logic© is integrated with C3's Chameleon© to provide a GPS platform with a complete back office, including, dispatching, billing, employee management, vehicle maintenance, inspection, generating invoices, and job tickets for any Vehicle Fleet Company. "This is the final piece that C3 needed to become a universal fleet solution provider. C3's complete assortment of GPS Tracking and Fleet Management Services will give any company a competitive edge in their industry. We've provided dispatchers with an all encompassing solution to meet their business needs." said Robert W. Chapman, CEO.

Enterprise Edition: C3's Chameleon© software integrated with Fleet Logic© Software creates the C3 Enterprise Edition that is the ultimate solution for managing mobile assets.

Note: Most GPS companies only offer a very rudimentary internet capability.

C3 is the Only Company That Provides All of the Following!
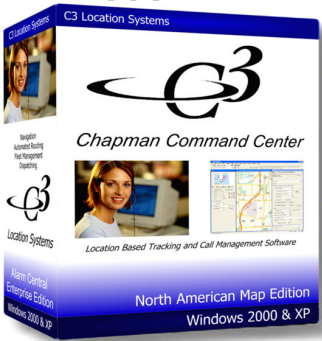

GPS Equipment
- Does the system provider have a full selection of GPS devices to accommodate different applications
- Does the system provider have GPS devices that support assisted GPS (A-GPS) for improved accuracy, indoor tracking and immediate location

Software Developed
- Is the system designed to be extended for future business requirements
- Will it scale to meet your needs today and tomorrow
- Does the system accommodate any type of information (streaming video, diagnostics from the car, mobile inventory, alerts, alarms)
- Can the system support millions of devices
- Does the system support any type of communications
- Can the system incorporate any future GPS device
- Does the system manage legacy devices
- Can the system pull your GPS data and integrate it into your existing systems
- Can the system use any database that the customer requires and be implemented in a few days (example: switch from Microsoft SQL to Oracle) C3 is the only company in the GPS industry that has the capability to switch to your database because we designed our system to use any database technology.
- Does the system integrate any map data from anywhere in the world
- Can the system integrate with any back end system you desire
- When hosting at your business can the system be hosted on both Windows or Unix/Linux

Services
- Can you re-configure your GPS device from your computer over the air
- Can your provider let you locate your assets from your cell phone
- Does the company have 24X7 live operator emergency response capability
- Does the system alert you on your cell phone, PDA, computer, email etc...
- Does the system manage mobile assets, people and stationary equipment under any circumstances
- Does the system support fleet management such as billing, route optimization, payroll, dispatch, General Ledger (G/L) interface, personnel management, vehicle mileage, service records, etc…
- Can the system be branded for your specific business
- Does the company have local people to support you
- Does the company provide data at wholesale prices
- Do you need an IT Administrator to install and maintain software at your location (Not with C3)
- Will you be charged a fee when you need a new report or an enhancement (Not with C3)
- Can the system pay for itself and generate additional profit for you
- Note: Very Important, Does the system provide a full back end for dispatch, billing and management for unique business like Limousine, Pest control, Service industries, Tow trucks, etc… (New Release – Chapman Fleet Logic platform fully integrated in the C3 System)

C3 Enterprise Edition
For Today's Mobile World

Features
- Can the company provide voice by the minute without a monthly contract
- Does the system accommodate any type of sensor
- If you have a business requirement that requires additional security, can the system be easily configured to accommodate the need
- Can you manage your assets from anywhere in the world (web enabled)
- Can the system perform an automated inventory on multiple car lots, new or used, at the push of a button
- Can you use any reporting tool to generate reports
- Does the system support multiple languages
- If you have a requirement for maximum security, can the servers be located in your business

Legal
- Does the system provider have patent protection for the transfer of location specific data
- Are the GPS devices FCC and PTCRB certified (very important)
- Does the system provider have compliance standards that cover all 50 states

Unlike most companies that only provide an Internet application, C3 Location System can install the C3 Enterprise Edition in your secure Data Center to keep ultra sensitive data completely under your control. This capability provides the highest-level security which is critical to companies that can't chance having the location of their assets compromised. Ie: police cars, armored vehicles government officials, security personnel etc...
